* denotes mandatory coursework
Objective: To enhance the language proficiency, communication process and the importance of English language in the present scenario; to develop good body language; to learn the correct sentence structure and to develop the career skills.

UNIT 1: Communication process:- Language for communication; Language skills; Status of English language; Types of communication; Means of communication; process of communication; Barriers in communication; Principles of effective communication; Pronunciation with proper accent, stress, tone & intonation

UNIT 2: Comprehension: Listening & Reading Comprehension; Framing questions from passages; Framing sentences using words, phrases etc. Types of sentences

UNIT 3: Grammar:- Question tag; Conditional sentences; Use of Gerund & infinitive; Degrees of comparison; Articles; Punctuation & capitalization; Subject-verb agreement; Sentence correction
UNIT 4: Presentation Skills:- Types of presentation; Strategies of effective presentation; Merits & demerits of interactive presentation & power point presentation; Presentation on the given topic

UNIT 5: Group communication:- Non verbal Communication; Body language in GD; Leading & directing discussion; Effective interventions; Expressing opinions & disagreements; GD in the selection process;; GD on corporate issues; Conference, seminar &symposium

UNIT 6: Interview:- An introduction; Types of interview with purpose; Preparation for job interview; Types of job interview; Strategies for successful interview; Press conference

UNIT 7: Career Skills:- Job interview; Resume writing & Job Application; Group dynamics; Decision making; Leadership qualities

**Prescribed Text book**

1. Technical Communication Principles & Practice (2\(^{nd}\) Ed.) by Meenakshi Raman & Sangeeta Sharma published by Oxford University

2. The Functional Aspects of Communication Skills by Dr.Prajapati Prasad published by S.K.Kataria & Sons

**SUGGESTED READING:**

1. Language in Use (Upper intermediate Level, Adrian Doff Christopher Jones, Cambridge University Press

5. The sounds of English, Veena Kumar, Makaav Educational Software, New Delhi.

1. **ERRORS IN NUMERICAL CALCULATIONS:**
Introduction; numbers and their accuracy; absolute; relative and percentage errors and their analysis; truncation errors; general formula; error calculation for inverse problem.

2. **SOLUTION OF NON-LINEAR EQUATIONS:**
Bisection method; Regula-Falsi method; Secant method; Newton-Raphson method; fixed point method; initial approximation and convergence criteria.

3. **SOLUTION OF LINEAR SYSTEMS:** Gauss elimination method; Gauss-Jorden method; UV factorization, Jacobi’s method; Gauss-Seidal method.

4. **INTERPOLATION & CURVE FITTING:**
Introduction to interpolation; Newton’s forward and backward formula; Sterling formula; Lagrangian polynomials; divided differences; least squares method.

5. **NUMERICAL DIFFERENTIATION AND INTEGRATION:** Derivatives from differences tables; numerical differentiation formulas, Newton-Cotes integration formulae; trapezodial rule; Simpson’s rule; Bool’s rule; Weddle’s rule; Romberg’s rule.

6. **SOLUTION OF DIFFERENTIAL EQUATIONS:**
Taylor’s series method; Euler and modified Euler’s method; Runge-Kutta method; Milne’s prediction corrector method, Adams–Bashforth method.

7. **SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS:** Finite difference approximation; solution of Laplace equation (standard 5 point formula) one-dimensional heat equation (Schmidt method, Cranck-Nicolson method; Dufort & Frankel method and wave equation.

**TEXT BOOK**
Grewal B. S., “Numerical Methods in Engineering and Sciences”, Khanna Publisher

**REFERENCE BOOKS**
1. **MEASURING SYSTEM FUNDAMENTALS**: Classification of Instruments (Absolute and Secondary; Indicating, Recording and Integrating Instruments, Based Upon principle of operation); Block diagram and description of block of generalized instrument; 3 forces in electromechanical Indicating Instrument (Deflecting, Controlling and Damping forces); Comparison between gravity and spring controls; comparison of damping methods and their suitability; Bearing supports, Pivot-less support, scale information, Instrument cases (covers).

2. **MEASURING INSTRUMENTS**: Construction, operating principle, torque equation, shape of scale, use as ammeter or as voltmeter (Extension of ranges), Use on AC / DC or both; Advantages and disadvantages, errors (Both on AC / DC) of PMMC types; Electrodynamics type; Moving Iron Type (Attraction, Repulsion and Combined type); Hot wire type and Induction type; Electrostatic type instruments; Electrodynamics and Induction type wattmeters; Single phase induction type energy meters; compensation and creep in energy meters.

3. **POWER FACTORS & FREQUENCY METERS**: Construction, operation principle torque equation, advantages and disadvantages of single phase power factor meter (Electro dynamic and moving from types); Electrical resonances type, Ferro dynamic and electro dynamic type frequency meter.

4. **A.C. BRIDGES**: Classification of resistances, resistance – Measurements by Wheat Stone Bridge ,Kelvin’s double bridge method and their limitation General Balance Equation, Circuit Diagram, Phasor Diagram, Advantage and Disadvantages, Application of Maxwell’s Inductance, Inductance – Capacitance, Hay’s, Anderson’s, Owen’s, De-Sauty’s, Schering and Wein’s Bridges, Shielding and Earthing.

5. **GENERATION AND ANALYSIS OF WAVEFORMS**: Block Diagram of pulse-generator; Signal generators; Function Generators; Wave analyzer; Distortion Analyzers; Spectrum analyzer; Harmonic Analyzer; Power Analyzer.

6. **ELECTRONIC MEASUREMENT**: Electronic Voltmeter; Multimeter; Wattmeter; Energy meter; Time; Frequency and phase measurements using CRO; Spectrum and wave Analyzer; Digital Counter; Frequency meter; storage oscilloscope.

7. **INSTRUMENTATION**: Transducers; classification and selection of transducers; strain Gauges; Inductive and Capacitive transducer; Piezo-electric and Hall-Effect transducers;
Thermistors and thermocouples; Photo-Diode and Photo-transistors; Encoder type digital transducer; Signal conditioning, Telemetry and Data Acquisition system.

1 **CONDUCTING MATERIALS**: Drift velocity, collision time; Mean free path; mobility; conductivity; relaxation time; factors affecting conductivity of materials; types of thermal conductivity; Wiedmeann-Franz law; Super conductivity; applications.

2 **DIELECTRIC MATERIALS**: Behavior of dielectric materials in static electric field; Dipole moments; Polarization; Dielectric constant; Polarizability, Susceptibility; mechanisms of polarization; behavior in alternating field; dielectric loss; loss tangent types of dielectric and insulating materials; electrostriction; Piezo-electricity.

3 **MAGNETIC MATERIALS**: Permeability; Magnetic susceptibility; magnetic moment; origin of magnetic dipole moment; angular momentum; Magnetization; Classification of magnetic materials-Para; Dia, ferro, antiferro; and ferri; Langevin’s theory of dia; Curie-Weiss law; spontaneous magnetism; domain theory; Magnetosriction; eddy current and hysteresis losses; applications.

4 **SEMICONDUCTORS**: Review of Si and Ge as semi-conducting materials; Continuity Equation; PN junction; Drift and Diffusion; Diffusion and Transition capacitances of P-N junction; breakdown mechanisms; ZENER diode.

5 **OPTICAL PROPERTIES OF MATERIALS**: 
Optical properties of metals; semiconductors and insulators; Phosphorescence; Luminiscense; Phosphors for CRO; display material for LCD; LED; solar cells and photo-detectors.

6 SEMICONDUCTOR DEVICES: Brief introduction to Planar Technology for device fabrication; BJT; JFET; MOSFETS.

7 POWER DEVICES: Thyristor; IGBT; VMOS; UJT; GTO; their working principles and characteristics.

1 INTRODUCTION: Vector Relation in rectangular; Cylindrical; Spherical and general curvilinear coordinate system. Concept and physical interpretation of gradient; Divergence and curl; Gauss’s Divergence and Stoke’s theorems.

2 ELECTROSTATICS - I: Electric field intensity; flux density and polarization; Electric field due to various charge configurations. Potential functions and displacement vector.

3 ELECTROSTATICS-II: Gauss’s law; Poisson’s and Laplace’s equation and their solution in rectangular coordinates; Uniqueness theorem; Capacitance and electrostatics energy; methods of electrostatics images; boundary conditions.

4 MAGNETOSTATICS – II: Magnetic field vector; Magnetic field intensity; flux density and magnetization.

5 MAGNETOSTATICS –II: Bio-Savart’s law; Ampere’s law; Magnetic vector potential; Energy stored in magnetic field; Boundary conditions ; Analogy between electric and magnetic field;

6 TIME VARYING FIELDS: Faraday’s law; Displacement currents and equation of continuity.Maxwell’s equations; Uniform plane wave in free space; Reflections; refraction and polarization of UPW; surface impedance; standing wave ratio. Poynting theorem and power considerations.
7 ELECTROMAGNETIC FIELDS: EM wave in Dielectrics; Conductors and Magnetic Materials and Skin effect.

1. ELECTRONIC INSTRUMENTS: Instruments for measurement of voltage; current and other circuit parameters; Q; meters; R.F. power measurements; introduction to digital meters.  
2. OSCILLOSCOPE: Block diagram; study of various stages in brief; high frequency CRO considerations. Sampling and stoppage oscilloscope.  
3. GENERATION and ANALYSIS OF WAVEFORMS:  
Block diagram of pulse generators; signal generators; function generators wave analysers; distortion analysers; spectrum analyser; Harmonic analyser; introduction to power analyser.  
4. FREQUENCY and TIME MEASUREMENT: Study of decade counting Assembly (DCA); frequency measurements; period measurements; universal counter; introduction to digital meters.  
5. TRANSDUCERS: Classification; Transducers of types: RLC photocell; thermocouples etc. basic schemes of measurement of displacement; velocity; acceleration; strain; pressure; liquid level and temperature.  
6. DISPLAY DEVICES: Nixie tubes; LED’s LCD’s; discharge devices; data acquisition and conversion system.  
7. INTRODUCTION TO SIGNAL CONDITIONING:  
DC signal conditioning system; AC signal conditioning system; data acquisition and conversion system.

TEXT BOOK

REFERENCE BOOKS
1. **SEMICONDUCTOR DIODE**: Diode as a rectifier; switching characteristics of diode; Diode as a circuit element; the load-line concept.

2. **SEMICONDUCTOR DIODE CIRCUITS**: Halfwave and full wave rectifiers; clipping circuits; clamping circuits; filter circuits; peak to peak detector; voltage doublers and voltage multiplier circuits.

3. **TRANSISTOR AT LOW FREQUENCIES**: Bipolar junction transistor : π characteristics; Ebers-moll model of transistor; hybrid model; h-parameters (CE; CB; CC configurations); analysis of a transistor amplifier circuits using h-parameters; emitter follower; Miller's Theorem; Effect of Emitter by pass capacitor on low frequency response; Step response of an amplifier; frequency response of R-C coupled amplifier; pass band of cascaded stages; Multi stage CE Amplifier.

4. **TRANSISTOR BIASING**: Operating point; bias stability; collector to base bias; self-bias; emitter bias; bias compensation; thermistor and sensistor compensation; thermal runaway.

5. **TRANSISTOR AT HIGH FREQUENCIES**: Hybrid model; CE short circuit current gain; frequency response; alpha; cutoff frequency; gain bandwidth product; emitter follower at high frequencies.

6. **FIELD EFFECT TRANSISTORS**: Junction field effect transistor; MOSFET Enhancement and Depletion mode; V-MOSFET; Common source amplifier; source follower; biasing of FET; applications of FET as a voltage variable resistor (V V R).

7. **REGULATED POWER SUPPLIES**: Series and shunt voltage regulators; power supply parameters; three terminal IC regulators; SMPS.

**TEXT BOOK**

**REFERENCE BOOKS**
LIST OF EXPERIMENTS
1. To find the roots of non-linear equation using Bisection method.
2. To find the roots of non-linear equation using Secant method.
3. To find the roots of non-linear equation using Newton’s method.
4. To solve the system of linear equations using Gauss-Elimination method.
5. To solve the system of linear equation using Gauss-Seidal iteration method.
6. To find the values of function at a particular point using Newton’s forward formula.
7. To find the values of function at a particular point using Newton’s backward formula.
8. To find the values of function at a particular point using Lagrange’s interpolation formula.
9. To integrate numerically using Trapezoidal rule.
10. To integrate numerically using Simpson’s rule.
11. To find the solution of o.d.e (ordinary differential equation) by Euler’s method.
12. To find the solution of o.d.e by Runge-Kutta method.
13. To find the numerical solution of Laplace equation.
14. To find the numerical solution of heat equation.
15. To find the numerical solution of wave equation.

REFERENCE BOOKS

LIST OF EXPERIMENTS
1. To study the use of LVDT or displacement transducers.
3. To calibrate an energy meter with the help of a standard wattmeter and a stop watch.
4. To measure power and p.f. by 3-ammeter and 3-voltmeter method.
5. To measure power and p.f in 3-phase circuit by 2-wattmeter method.
6. To measure capacitance by De Sauty's bridge.
7. To measure inductance by Maxwell's bridge.
8. To measure frequency by Wien's bridge.
9. To measure the power with the help of C.T and P.T.
12. To measure low resistance by Kelvin's double bridge.
13. To measure high resistance by loss of charge method.

EN-202 COMMUNICATION SKILLS-4 L T P Cr
2-0-0 3

**Objective:** To strengthen the four language skills and to refine the presentation skills; to learn report writing and to practice the etiquettes for better personality.

**UNIT 1:** Semantics:- Phrasal verbs & idioms, their usage in sentences; foreign words & phrases, their meaning and sentence formation; abbreviations & acronyms

**UNIT 2:** Remedial grammar:- Types of verb; Active voice & passive voice; Types of sentences based on mood and structure; Reported speech; Sentence correction based on tense, voice & reported speech

**UNIT 3:**- Listening & Reading Skills: Listening & hearing; Barriers in listening; Effective listening; Listening exercises; Types of reading; Reading with correct tone & intonation; Reading comprehension; Paraphrasing; Summarizing the passage

**UNIT 4:** Oral communication:- Presentation; Self introduction in front of the Interview board; Public speaking tips; Effective PPT. Presentation on topics of current importance

**UNIT 5:** Writing skills & Internal communication:- Meeting; Agenda; Minutes; Notice; Memo; Memorandum; Circular:- Paragraph writing; Job application & Resume; Introduction to Report writing; Structure & objective of different types of reports; Report writing; Press report

**UNIT 6:** Business Correspondence: Note-Making, Precis writing; Types of Business letters; Letter of Appointment; Resignation Letter; Formal Invitation
UNIT 7: Professional skills:- Interpersonal skill; Job interview; Team work; Leadership qualities; Case studies on the above professional skills

Prescribed Text book

1. Technical Communication Principles & Practice (2nd Ed.) by Meenakshi Raman & Sangeeta Sharma published by Oxford University

2. The Functional Aspects of Communication Skills by Dr.Prajapati Prasad published by S.K.Katariya & Sons

SUGGESTED READING:
1. Language in Use (Upper intermediate Level, Adrian Doff Christopher Jones, Cambridge University Press

5. The sounds of English, Veena Kumar, Makaav Educational Software, New Delhi.

1. INTRODUCTION: Definition of economics; difference between micro and macro economics; central problems of economy including PP curve; factors of production
2. **UTILITY**: concept and measurement of utility; Law of Diminishing Marginal Utility (DMU); derivation of Law of Demand from Law of DMU; Law of Equimarginal Utility (EMU) – its practical applications

3. **DEMAND**: What is demand and supply; shift in demand and extension of demand; law of demand and law of supply; demand function; demand schedule; elasticity of demand; measurement of elasticity of demand; factors affecting elasticity of demand; role of demand and supply in price determination and effect of changes in demand and supply on prices

4. **PRODUCTION FUNCTIONS**: Meaning of production and production functions; Law of Variable Proportion; returns to scale, internal and external economies and diseconomies of scale.

5. **COSTS**: Various concepts of costs: fixed cost, variable cost, average cost, marginal cost, opportunity cost; shape of average cost, marginal cost, total cost etc. in short run and long run.

6. **MARKET STRUCTURES**: What is market; main features of perfect competition; monopoly; oligopoly; monopolistic competition.

7. **MACRO ECONOMICS**: Macro economics: brief concepts of GDP, GNP, NI, per capita income; inflation; privatization; globalization (merits & demerits); elementary concepts of VAT, WTO, GATT and TRIPS

1. **TOPOLOGY**: Principles of network topology; graph matrices; network analysis using graph theory; cut and tie set.

2. **LAPLACE TRANSFORMATION and ITS APPLICATION IN CIRCUIT ANALYSIS**: Introduction; Laplace transformation of derivative; integral; common forcing function; application of Laplace transform in circuit analysis; step response of RL; RC series and parallel circuit; impulse response of RL; RC Series and parallel circuit.

3. **TRANSIENT RESPONSE**: Introduction; Transient Response of RC; RL; RLC Circuits to various excitation signals such as step; ramp; impulse and sinusoidal excitations using laplace transform.

4. **NETWORK FUNCTIONS**: Terminal pairs or Ports; Network functions for one-port and two-port networks; poles and zeros of Network functions; Restrictions on pole and zero Location s for driving point functions and transfer functions; Time domain behavior from the pole-zero plot.
5. CHARACTERISTICS AND PARAMETERS OF TWO PORT NETWORKS:
Relationship of twoport variables; short-circuit Admittance parameters; open circuit impedance; parameters; Transmission parameters; hybrid parameters; relationships between parameter sets; Interconnection of two port networks.

6. TYPES OF FILTERS AND THEIR CHARACTERISTICS: Filter fundamentals; highpass; low-pass; band-pass; and band-reject Filters.

7. NETWORK SYNTHESIS: Positive real functions; synthesis of one port and two port networks; elementary ideas of Active networks.

1. FUNDAMENTALS OF DIGITAL TECHNIQUES:
Digital signal; logic gates: AND; OR; NOT; NAND; NOR; EX-OR; EX-NOR; Boolean algebra.
Review of Number systems. Binary codes: BCD; Excess- 3; Gray; EBCDIC; ASCII; Error detection and correction codes.

2. COMBINATIONAL DESIGN USING GATES:
Design using gates; Karnaugh map and Quine Mcluskey methods of simplification.

3. COMBINATIONAL DESIGN USING MSI DEVICES:
Multiplexers and Demultiplexers and their use as logic elements; Decoders; Adders/Subtractors; BCD arithmetic circuits; Encoders; Decoders/Drivers for display devices.

4. SEQUENTIAL CIRCUITS: Flip Flops : S-R; J-K; T; D; master-slave; edge triggered; shift registers; sequence generators; Counters; Asynchronous and Synchronous Ring counters and Johnson Counter; Design of Synchronous and Asynchronous sequential circuits.
5. **DIGITAL LOGIC FAMILIES**: Switching mode operation of p-n junction; bipolar and MOS. devices. Bipolar logic families: RTL; DTL; DCTL; HTL; TTL; ECL; MOS; and CMOS logic families. Tristate logic; Interfacing of CMOS and TTL families.

7. **PROGRAMMABLE LOGIC DEVICES**: ROM; PLA; PAL; PEEL; GAL; FPGA and CPLDs.

1. **INTRODUCTION TO ELECTRO-MECHANICAL ENERGY CONVERSION**: Basic principles, concept and laws of magnetic circuits; energy in single and multiple excited magnetic systems; basic differential equations of electromechanical energy conversion devices; equations for force and torque in single and multiple excited magnetic systems; reluctance torque.

2. **SINGLE PHASE TRANSFORMERS**: Basic principle; basic theory of an ideal transformer; construction of transformers i.e. core, winding, tank, conservator, Breather, cooling methods, Buchholz relay; equivalent circuit; phase diagram; per unit representation of parameters;
regulation; losses and efficiency; transformer tests i.e. open circuit, short ckt. and sumpner’s test; separation of iron losses; nature of magnetizing circuit; plotting of B – H curve; inrush current; harmonics; parallel operation of 1 –Φ transformer and load sharing; auto transformer: Principle; construction; comparison with 2 – winding transformer; application of autotransformer.

3. THREE PHASE TRANSFORMER: Construction of thzone winding transformer; various types of connections; their comparative features; zig-zag connection; phase conversion - 3Φ to 1Φ; 3Φ to 2Φ; 3Φ to 6Φ and 3Φ to 12Φ.

4. SPECIAL TYPE TRANSFORMERS: Tap changing transformer; phase shifting transformer; pulse transformer; isolation transformer; welding transformer; rectifier transformer; high frequency transformer.

5. D.C. GENERATORS: Elementary DC machine; emf equation; Principle and construction of D. C. Generator; lap and wave winding; methods of Excitation of D. C. Generators; Armature Reaction; Commutation in D. C. Machines; Compensating windings; characteristics of D. C. Generators; Parallel operation of Generators.

6. D. C. MOTORS: Construction, principle and operation of D.C motors; back emf concept; torque equation; power balance equation; Characteristics of different types of DC motors, losses in DC motors, efficiency, testing: Swinburne’s, Hopkinson’s, and retardation test.

7. CONTROL OF DC MOTORS: Necessity of starter; 3 point and 4 point starters. Speed control; flux Control; armature resistance and armature voltage control. Electrical Braking: Methods of electrical braking i.e. dynamic, regenerative and plugging.

1. **GENERAL PRINCIPLES:** An electric energy system—operations, objectives and structure—distribution level, subtransmission level and grid level; feeders; distributors and service mains; electric energy demand; and power development in India; resources for generation; present power position in India; future planning; Power Corporations in India. Basic definitions—connected load; maximum demand; demand factor; load and load duration curve; load factor; base load and peak load power plants; plant capacity factor; plant use factor.

2. **THERMAL POWER, HYDRO POWER, NUCLEAR POWER STATIONS:** Selection of site for thermal power plants; thermodynamic cycle for steam flow; Rankine cycle; actual Rankine cycle; reheat cycle; regenerative cycle qualitative treatment; general layout & main components of thermal power station (in brief). Available hydropower; selection of site for hydroelectric power stations; their classifications; layout and main components (in brief). Nuclear power plants—fission energy; general layout and main components (in brief); waste disposal; types of nuclear reactors (in brief); general lay out and main components (in brief); waste disposal; types of nuclear radiations & their effect.

3. **CIRCUIT PARAMETERS OF TRANSMISSION LINES:** Review of calculations of resistance, inductance, capacitance of a single conductor, multi conductor, single phase and three phase transmission lines; transposition; double circuit lines; skin and proximity effect; current carrying capacity and use of Tables.

4. **ANALYSIS OF TRANSMISSION LINES:** Classification; generalized ABCD constants; representation & steady state analysis of short and medium lines; regulation and efficiency; nominal—T and pi circuits; Long line: current—voltage relationship, hyperbolic solution; surge impedance; Surge impedance loading; lumped circuit equivalent representation; Ferranti effect; power flow through a transmission line; reactive power generation/absorption of a line; power transfer capability; shunt and series compensation (in brief).

5. **CORONA AND RADIO INTERFERENCE:** Electric stress between parallel conductors; disruptive and visual critical voltage; corona power loss; factors effecting corona; effects of corona. Radio interference—electromagnetic effect; electrostatic effect; reduction of interference.

6. **INSULATORS:** Overhead line insulators—types and materials; voltage distribution calculations; different methods of equalizing voltage drops across insulators of string; string efficiency.

7. **INSULATED CABLES:** Cable conductor, insulating, sheathing and armouring materials; single core and three core belted cables, gas and oil pressure cables (qualitative treatment); insulation resistance and capacitance calculations; capacitive and intersheath grading; sheath and dielectric loss; thermal rating of cables.

LIST OF EXPERIMENTS
1. Transient response of RC circuit.
2. Transient response of RL circuit.
3. To find the resonance frequency, Band width of RLC series circuit.
4. To calculate and verify “Z” parameters of a two port network.
5. To calculate and verify "Y" parameters of a two port network.
6. To determine equivalent parameter of parallel connections of two port network.
7. To plot the frequency response of low pass filter and determine half-power frequency.
8. To plot the frequency response of high pass filter and determine the half-power frequency.
9. To plot the frequency response of band-pass filter and determine the band-width.
10. To calculate and verify "ABCD" parameters of a two port network.
11. To synthesize a network of a given network function and verify its response.
12. Introduction of P-Spice

LIST OF EXPERIMENTS
1. Study of TTL gates – AND; OR; NOT; NAND; NOR; EX-OR; EX-NOR.
2. Design and realize a given function using K-maps and verify its performance.
3. To verify the operation of multiplexer and Demultiplexer.
4. To verify the operation of comparator.
5. To verify the truth tables of S-R; J-K; T and D type flip flops.
6. To verify the operation of bi-directional shift register.
7. To design and verify the operation of 3-bit synchronous counter.
8. To design and verify the operation of synchronous UP/DOWN decade counter using J K flip-flops and drive a seven-segment display using the same.
9. To design and verify the operation of asynchronous UP/DOWN decade counter using J K flip-flops and drive a seven-segment display using the same.
10. To design and realize a sequence generator for a given sequence using J-K flip-flops.
11. Study of CMOS NAND and NOR gates and interfacing between TTL and CMOS gates.
12. Design a 4-bit shift-register and verify its operation. Verify the operation of a ring counter and a Johnson counter.

LIST OF EXPERIMENTS

2. Study of Frequency Modulation and determination of Modulation index.
3. Study of Phase Modulation.
5. Study of Pulse Width Modulation.
7. Study of Pulse Code Modulation.
8. Study of frequency Shift Keying.
9. Study of ASK and QASK.
10. Study of PSK and QPSK.
11. Project related to the scope of the course.

LIST OF EXPERIMENTS
1. To find turns ratio and polarity of a 1-phase transformer.
2. To perform open and short circuit tests on a 1-phase transformer.
3. To perform Sumpner’s Back to back test on 1-phase transformers.
4. Parallel operation of two 1-phase transformers.
5. To convert three phase to 2-phase by Scott-connection.
6. To perform load test on DC shunt generator.
7. Speed control of DC shunt motor.
8. Swinburne’s test of DC shunts motor.
9. Hopkinson’s test of DC shunt M/Cs.
11. To plot o.c.c. Of D.C. Shunt generator
12. To perform load test on DC shunt Motor.
